## **DETAILED ACTION**

Claims 1-10 have been considered.

Restriction to one of the following inventions is required under 35 U.S.C. 121:

5

I. Claims 1-5 are drawn to a method for accessing information using a public key as authorization, classified in class 713, subclass 182 (Electrical Computers and Digital Processing Systems: System Access Control Based on User Identification by Cryptography). Authorization is provided in this method based on one single test, the matching of a public key.

10

II. Claims 6-10 are drawn to a method for accessing information using a combination of a public key and a generated sequence number as authorization, classified in class 713, subclass 184 (Electrical Computers and Digital Processing Systems: System Access Control Based on User Identification by Cryptography: PIN/Password Generator Device). Authorization in this method requires two separate tests, the matching of a public key and the matching of a sequence number. This method is distinct from invention I because it requires two tests, not one test as in invention I. This method has a separate classification in the art because it requires a sequence generator (password generator).

15

20

25

Inventions [I] and [II] are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP 806.05(c)).

In the instant case, the combination (II) as claimed does not require the particulars of the subcombination (I) as claimed because the combination does not require step k of the subcombination, "if the step of comparing the check word and the data user public key indicates that the check word and the data user key match, recording permission to transfer the information in an access list". Put simply, this step is "if a key matches, record permission". The combination has step n, "if the step of comparing the

check word and the data user public key indicates that the check word and the data user public key match, and further if the step of comparing the check number and an expected sequence number indicates that the check number and the expected sequence number match, recording permission to transfer the information in an access list". Put simply, this step is "if a key matches AND a sequence number matches, record permission". To put this in logical terms, the combination (II) is "IF A and B, THEN C" while the subcombination (I) is "IF A, THEN C". The combination merely requires "A", not "IF A, THEN C". Not only does the combination not require the step "IF A, THEN C", the combination also precludes the use of "IF A, THEN C" as this is a separate logical function which would not require both A and B and hence could not satisfy checking both the key (A) and the sequence number (B).

The second part of the combination/subcombination requirement is that the subcombination has utility by itself or in other combinations. In the instant case, the subcombination could be used in a system which only checks the key for authorization, not a sequence number.

Because the inventions are distinct for the reasons given above and have acquired a separate status in the art as seen by their separate classification in the restriction, restriction for examination purposes is proper. A complete response to this action must include an election of the group to be examined, even if the requirement is traversed.

## Conclusion

A shortened statutory period for response is set to expire one month (not less than 30 days) from the mail date of this letter. Failure to respond within the period for response will result in ABANDONMENT of the application (see 35 U.S.C. 133, M.P.E.P. 710.02, 710.02(b)).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kevin Schubert whose telephone number is (571) 272-4239. The examiner can normally be reached on M-F 7:30-6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Emmanuel Moise can be reached on (571) 272-3868. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306. Application/Control Number: 10/082,693
